

Tailoring

The client enters the site, having previously registered, places an order for the tailoring of certain products with the criteria he needs. The client can also leave comments under the order. The administrator checks the order, if it can be fulfilled, then sets the price of the order and the deadline.

Functions not authorized by the client:

1. Register;
2. View the main page.

Functions of the authorized client:

1. Login to the system;
2. Place an order;
3. Viewing your orders;
4. Cancel the order;
5. Confirm the price of the order;
6. Write comments under the order
7. Exit.

Administrator functions:

1. Login to the system;
 2. Review of all customer orders;
 3. Change the status of the order (Cancel, confirm);
 4. Write comments under the order
 5. Exit.
-

Broader description:

Main page:

- at the top of the button: place an order, register;
(if the client is registered, then the buttons: order, personal account, exit)
- Description of who we are, what we do;
- 3 popular products will be shown;
- some contact information at the end.

(Example <https://www.eurosoftware.cz/index.php/en>)

Registration

The client enters the phone number, password, first name, last name, country (optional), mail (optional).

The data is checked, if everything is fine, the client is transferred to the Telegram bot, where the client must enter a phone number and receive a code that will need to be entered on the site, if the code is entered correctly, the client is registered.

Order a product:

- There are ready-made versions of the product, for example:
a dress in which you can change, only the color and/or size, but the size is only the one offered by the site. For example :100, 200, 300. 188 cannot be selected.
- All ready options can be found by filter and sorted

Order not the order type:

To do this, you will need to click the order atypical order button, where you will need to choose:

- * color;
- * material;
- * size (I am thinking of making it so that the client can specify up to 10 sizes (legs, arms, waist, chest, neck or other)); Example in Figure 1.

You can add photos (as an example of what he wants) up to 10 pieces and up to 50 MB in total, photos should weigh.

After registration, the order has a temporary value until the administrator sets the final price.

Client's personal order

Here you will be able to view all the ordered orders, where their status will be visible (Awaiting review, ready for execution, in development, done, rejected). Orders can be sorted and filtered. The order can be downloaded by clicking the cancel button. For further work with an atypical order, it is necessary to confirm its price after it has been set by the administrator.

Personal office for the Administrator

All orders will be here, you can view all information about the order and its owner, change the order status. Sort and filter orders. When changing the status of a non-typical (customer-created) order from "awaiting review" to "ready for execution", you need to set a price that, in the opinion of the administrator, will give a profit. The administrator sets a deadline for all orders that have been accepted.

Comments to the order

Allows you to add information about the order. To get access to them, you need to click on the comment button, which is on the order, in the personal account.

The image displays three identical size widgets arranged in a 2x2 grid. Each widget is a rounded rectangle with a light gray background and a thin purple border. Inside each widget, there is a title bar at the top with the text 'Частина замовлення (рукав,талія)' in a light gray font. Below the title bar, there are three input fields arranged horizontally, each with a light gray border and a light gray background. The labels for these fields are 'Ширина' (Width), 'Висота' (Height), and 'Довжина' (Length), all in a light gray font. To the right of the three widgets, there is a fourth widget that is a rounded square with a light gray background and a thin purple border. It contains a large purple plus sign icon.
